

AUTOFLOWER COACHING

3 VISITS...\$250

Initial visit: We will talk about germinating your seed or planting your seedling. We will go over the lifecycle of an autoflower. When we leave, you will have either started the germination process or planted your seedling. You will have a handout with the information that was gone over.

3 week check in: this is the vegetative stage. We will assess whether or not it is time to upsize to a 5 gallon pot. We will coach on what needs to happen in the weeks leading up to flowering and harvest.

At 11 or 12 weeks: We will check the trichome and assess harvest time for you. We will train you on harvesting and curing.

Each visit will last between 30 minutes and an hour.
